INTERESTS Neural machine translation, big data, language modeling, and natural language processing

EDUCATION **PhD, Carnegie Mellon** 8/2008–9/2013  
Efficient Language Modeling Algorithms with Applications to Statistical Machine Translation  
Department: Language Technologies Institute in the School of Computer Science  
Adviser: Professor Alon Lavie

**Bachelor of Science, Caltech** 9/2003–3/2007  
Double major in Mathematics and Computer Science, with honors.

EXPERIENCE **Lecturer (Assistant Professor), University of Edinburgh** 8/2015–Present  
Lead research in neural machine translation, language modeling, and algorithms. Supervising four PhD students.

**Senior Research Scientist, Bloomberg** 8/2014–7/2015  
Machine translation lead. Created new models and investigated hardware acceleration for publication. Solicited, reviewed, and advocated funding for research proposals from universities.

**Postdoctoral Scholar, Stanford** 10/2013–7/2014  
Responsible for machine translation efforts at Stanford, including supervising two PhD students and four Master's students. Research included web-scale text processing, algorithms for machine translation, and applications of neural networks.

**Research Associate, University of Edinburgh** 8/2011–12/2011; 8/2012–9/2013  
Created an efficient search algorithm for syntactic machine translation, made language model estimation efficient, contributed to the Moses machine translation system, and informally advised PhD students.

**Software Engineer, Google** 3/2007–8/2008  
Optimized language classification for card catalog information about books as part of the Google Books team. Created the ranking function for a search system in Picasa Web Albums. Lectured at MIT about Hadoop.

**Intern, Infosys Technologies** 7/2006–9/2006  
Travelled to Bangalore, India for an internship with the Software Engineering Technology Lab. Applied latent Dirichlet allocation to automatically organize source code.

**Undergraduate Researcher, Netlab at Caltech** 6/2005–6/2006  
Developed an error model for kernel principal component analysis (kPCA) and applied it to automatically analyze computer network traffic and flag possible attacks.

**Undergraduate Researcher, Galaxy Evolution Explorer** 6/2004–3/2007  
Found variable stars by creating and mining a 193-million row database of measurements from a satellite.

GRANTS RECEIVED **Kenneth Heafield.** Training neural machine translation systems. \$70,000 in Azure credits from Microsoft via the Alan Turing Institute, 2017.

**Kenneth Heafield.** Mining and Training on Translations from the Web. \$20,000 in Azure credits from Microsoft, 2017.

**Kenneth Heafield.** Neural network primitives and distributed training. 40% buyout from Intel via the Alan Turing Institute, 2017.

**Kenneth Heafield.** Phrase-based decoding. \$30,000 gift from eBay, 2016.

**Kenneth Heafield.** Decoding methods for spelling correction and synonym generation. \$50,000 gift from Facebook’s Research and Academic Relations Program, 2016.

**Kenneth Heafield.** Local coarse-to-fine decoding for long-distance Models. \$57,724 gift from Google Research Awards, 2015.

**Kenneth Heafield** and Rico Sennrich. Faster decoding and better features via local coarse-to-fine. \$70,949 gift from Amazon Academic Research Awards, 2015.

**Kenneth Heafield**, and Christopher Manning. Faster machine translation and principled rule learning. \$150,000 gift from Bloomberg, 2014.

Christopher D. Manning, **Kenneth Heafield**, and Dan Jurafsky. Applying tera-scale language models to advance machine translation. National Science Foundation XSEDE grant CCR140009. These grants award time on supercomputers, in this case 200,000 CPU hours, 2013.

GRANTS  
FUNDED

Christopher Manning. Natural Language Processing and Machine Learning. \$75,000 gift from Bloomberg, 2015.

Shay Cohen. Latent-Variable Learning for Transition-Based Parsing. \$63,379 gift from Bloomberg, 2015.

Philipp Koehn. High Quality Parallel Corpus Extraction from the Web. \$50,000 gift from Bloomberg, 2015.

Lane Schwartz. US Machine Translation Marathon at UIUC. \$10,000 gift from Bloomberg, 2015.

Fei-Fei Li. SAILORS AI summer outreach. \$10,000 gift from Bloomberg, 2015.

OPEN-  
SOURCE  
SOFTWARE

### **KenLM**

An efficient library for estimating and querying language models. Compared with SRILM, querying is 2.4 times as fast and uses 57% of the memory. It has been adopted by all major open-source machine translation systems.

### **Hypergraph Search**

Implements my new search algorithm for syntactic machine translation, which makes translation 1.6–6.0 times as fast as with cube pruning.

### **System Combination (MEMT)**

Combines the outputs of multiple machine translation systems into a single sentence with better quality.

COMMUNITY  
EVALUATION  
RESULTS

### **First Place in Three Language Pairs, Workshop on Machine Translation** 2013

Using a language model estimated on 126 billion tokens, my three submissions ranked first in their respective language pairs, each of which had 11–13 participants.

**First Place System Combinations, Workshop on Machine Translation** 2011  
Submitted to all ten system combination tracks, each of which had 2–8 participants. Eight of my submissions ranked first in their respective tracks.

CONFERENCE PAPERS **Kenneth Heafield**, Chase Geigle, Sean Massung, and Lane Schwartz. Normalized Log-Linear Language Model Interpolation is Efficient. *The 54th Annual Meeting of the Association for Computational Linguistics*, Berlin, Germany, August, 2016.
